Submission Date	16 October 2026
Research Scope	Daily stock prices, returns, trading volume, historical volatility, and data-source considerations

1. Purpose of the Literature Review

This literature review identifies reliable background material relevant to a stock market analytics project. The project aims to analyze daily stock prices, compare historical performance, examine trading activity and volatility, and present the results in an interactive dashboard. The reviewed sources provide context for understanding stock-market data, interpreting returns, and recognizing the limits of historical performance as an indicator of future results.

The summaries are preliminary. Team members should open and read each source, record the date accessed, and update the relevance and evaluation notes to reflect what they actually used in the project.

2. Source 1 — Yahoo Finance: Historical Data

Source title: Yahoo Finance — Historical Data (company-specific historical prices page)

Link: https://finance.yahoo.com/

Source type: Financial data platform / historical market data.

Summary

Yahoo Finance provides company-specific market pages and historical price information for many publicly traded securities. Depending on the selected symbol and available data, daily records may include Open, High, Low, Close, Adjusted Close, and Volume.

Relevance to the Project

This is the intended data source for the project. Its historical records can support daily price comparisons, return calculations, trading-volume analysis, and dashboard filters by company and date. The team should document the exact symbols, date range, retrieval method, retrieval time, and any limitations encountered.

Evaluation / Notes to Complete

- Confirm that the chosen stock symbols and required historical fields are available.
- Verify whether the selected access method supports the planned update frequency.
- Record any source restrictions, missing dates, delayed data, or field-definition issues.

5. Cross-Source Findings and Project Implications

Theme	Implication for the Project
Data availability and consistency	The team should confirm the actual fields and coverage before finalizing KPIs or dashboard visuals.
Performance comparison	Daily and period returns can help compare historical price performance across companies and periods.
Risk context	Historical volatility can complement return measures, but it does not predict future outcomes with certainty.
Transparent decision support	Any company ranking should disclose its criteria and timeframe and should not be presented as a guaranteed investment recommendation.
Update transparency	The dashboard should show the latest available market-data date/time and should distinguish daily historical data from intraday updates.

6. Research Gaps and Next Steps

- Select the exact list of companies, stock symbols, market(s), and historical date range.
- Verify the data acquisition method, refresh frequency, and permitted use of the selected Yahoo Finance data.

- Review exact source pages and capture access dates; replace broad homepage links with the specific pages actually used.
- Add any additional academic or professional sources required by the instructor, if applicable.
- Finalize the definitions and calculation conventions for daily return, period return, volume, and volatility.
- Record how the project will handle market holidays, missing observations, adjusted prices, and inconsistent data.
